ABOUT ME

I'm 10 months into my frontend development journey.

My goal is to build excellent applications with a nice-looking interface providing an efficient user experiences.

When I'm not in front of a computer screen, I'm probably reading books, exploring new places in the city or jogging.

EXPERIENCE

Wordpress freelance developer
March 2023 to April 2023

- Developed a multi-page website using WordPress and Elementor
- Created a layout and design for the website
- Worked with client requirements
- Set up user interface elements
- Customised elements using CSS
- Created adaptive for the website

Description:

Development of a multi-page website for a sports school with the functionality of adding, editing articles in the news feed (via admin panel) and photo galleries.
WordPress was chosen as a technology stack.

React developer (training)
Yandex Practicum
October 2022 to February 2023

- Learned React and React hooks
- Made the functionality of modal windows
- Implemented drag and drop functionality using the react-dnd library
- Used Redux as a state manager for the app
- Used React routing to work with pages and made protected route
- Implemented authorization, registration using jwt tokens and cookies
- Typed the code using TypeScript
- Implemented a socket connection using WebSocket to track new orders
- Deployed the app via GitHub Pages

Description:

I took the React course because I wanted to get not only theory, but also best practices in React from leading IT company. The goal of the course was to build an online burger store with an order constructor, authorization and order status tracking.

The course was built according Agile methodology, so it was divided into sprints with tasks and deadlines. Experienced developers - reviewers commented the code in pull requests and could accept or reject pieces of the code. After that the branch could be merged with the main branch.

Study of Frontend development technologies
June 2022 to September 2022

- Studied HTML, CSS, JavaScript
- Focused on ES 6 syntax
- Learned how to manage the browser page: DOM, events, forms

Description:

I studied the world of front-end development. Step by step I learned HTML, CSS, JavaScript. I used documentation, training videos on YouTube, tasks from Codewars, training courses on The odin project, Scrimba. I created several projects. The code is posted on my GitHub.
